CEMLink™6

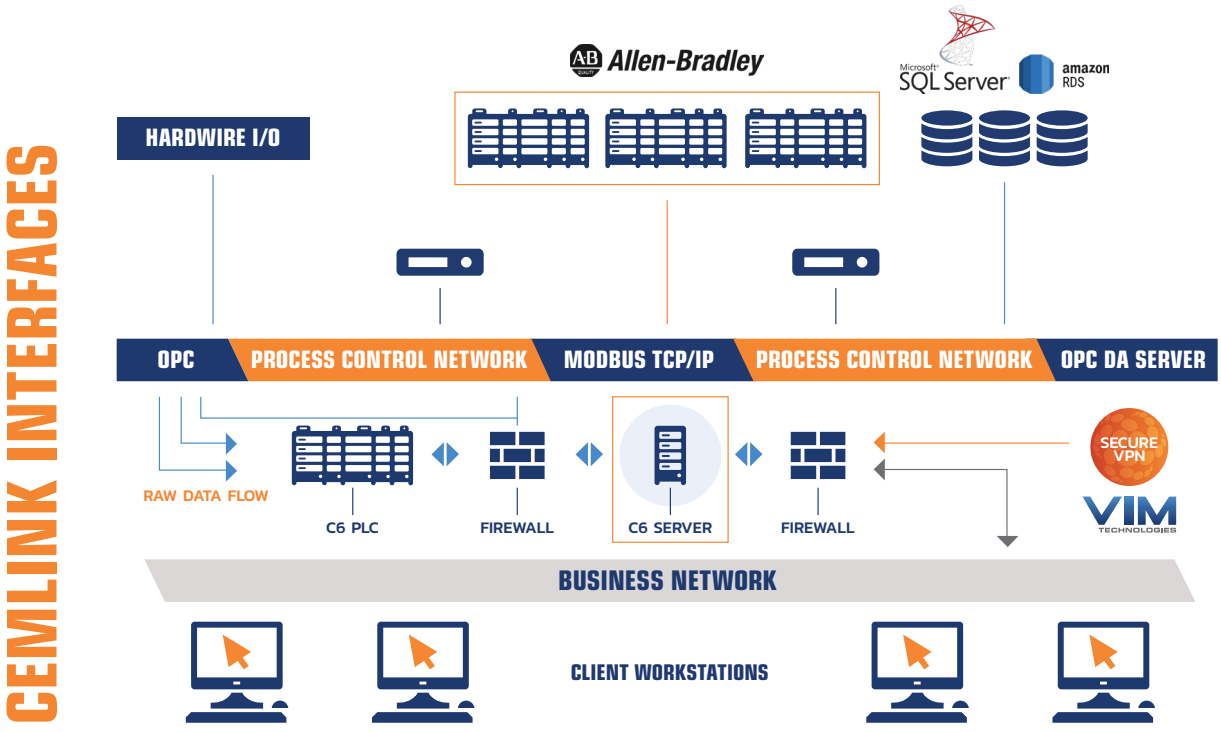
Environmental compliance
made simple.

What is CEMLink 6?

CEMLink 6 is a complete software solution to collect, analyze, calculate, validate, and provide transparent environmental compliance data and reporting requirements. The software delivers critical information at the user's fingertips while satisfying the rigorous requirements of an industrial control system.

CEMLink Interface

CEMLink 6 is built to provide easy integration and access to CEMS and compliance-related data through several standard tools and interfaces as well as customized solutions. CEMLink 6 has the tools you need embedded in the product. Time is money, and with CEMLink 6 we make validating and quality assuring your data as efficient as possible. The software intelligence is designed by environmental engineers for environmental engineers, so your time is not wasted.



Data In

- Programmable Logic Controller (PLC)
- PLC Messaging (Allen Bradley, Modbus)
- CEMLink 6 Drivers (OPC, Modbus, SQL, etc,)
- CEMLink 6 Data Backfill

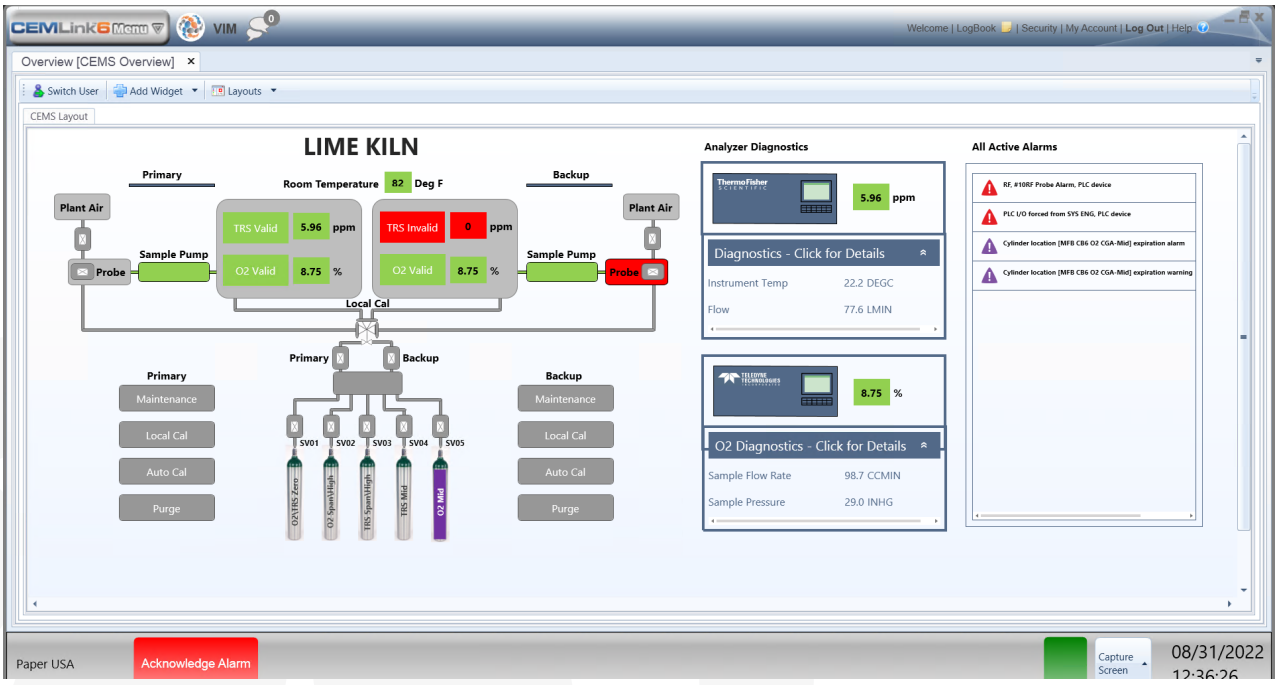
Data Out

- Pushing Data out of CEMLink (Data Provider, OPC, PI Batch)
- Pulling Data out of CEMLink (SQL Views, Excel AddIn, Power BI)

Overview Screen/Overview Dashboard

The Dashboard Overview Screen offers Environmental Personnel and Plant Operations a real-time window into their overall compliance system model. With just a glance at the Dashboard Overview Screen, you will know if you are complying or if you are heading towards any pending problems.

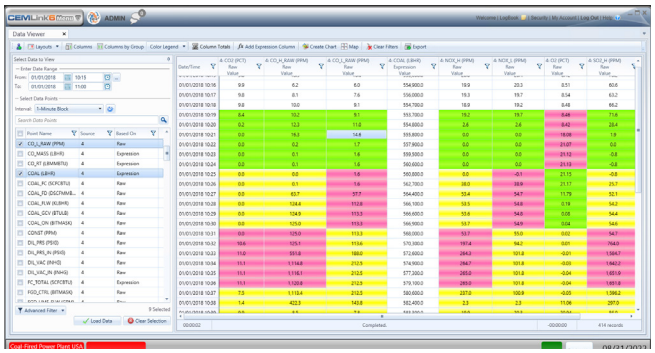
DASHBOARD



Data

As with all generations of CEMLink, data is always our core concern. With CEMLink 6, managing your data has never been more logically thought out. With our completely new Enhanced Data Viewing and Data Editing Utilities, you will have all the tools you need to effectively manage and contain your data, all easily and intuitively accessible right on your screen.

DATA



Diagnostics

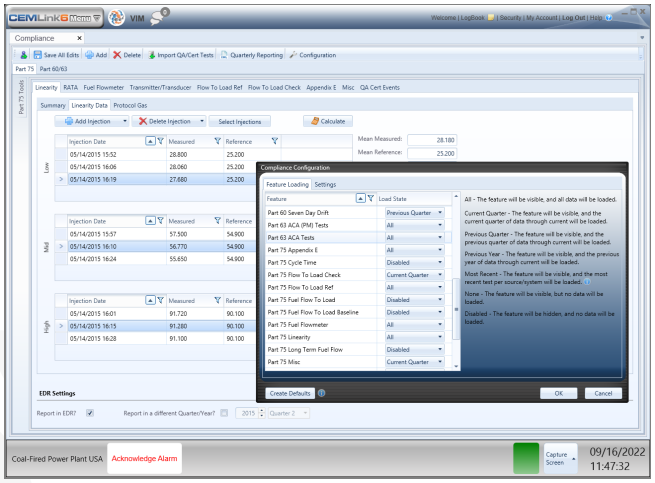
Want to tie into your analytical equipment and have access to the health of all your systems? CEMLink 6 has direct device interface capabilities built in, along with a diagnostic wizard that allows you to build your own diagnostic screens and track all compliance events. Combined with CEMLink's built in notification system, users can be notified real-time via text or email with the information necessary to tackle any problem.

Analyzer Diagnostics allows you to tap into the diagnostic output of the latest generation of smart analyzers. CEMLink 6 allows performance tracking of available analyzer diagnostic data through an industry-standard Modbus TCP/IP connection. This feature assists I&C, and CEMS technicians manage uptime expectations and monitoring availability which is critical to reportable data quality.

Compliance

CEMLink 6 has all the tools you need to assess your data quality and ensure that you stay in compliance. Whether you report Part 75 or Part 60, PADEP, RECLAIM, it's all built into the CEMLink 6 engine. With our compliance-first approach, we assist our end-user partners in managing their overall compliance risk.

COMPLIANCE



VIM goes through an extensive documentation process before configuring any system. You can be assured that you have all the detailed information of your project documented from the start and updated routinely by our industry leading support team any time you request changes to your system. In addition, the CEMLink 6 platform is completely transparent to its users. You can always 'right-click' on any data calculation in the system to trace its constituents.

Configurability

Configurability is the theme throughout the CEMLink 6 product, with "Build and Save" functionality on all screens. Save your most common work functions so they are easily accessible when you need them most. CEMLink 6 can track different information and display it in different ways using personalized/customized dashboards that meet the needs of individual users.

Reporting

The C6 Report Writer comes pre configured with a standard set of default compliance reports. The C6 Report Writer is also a fully configurable, end user area that may be used to create ad-hoc reports or user defined default reports.

Having a system that has been engineered to your specific requirements frees up time that would normally be spent making sure the data being reported is accurate. With built in regulatory specific reporting formats, the days of spreadsheet compilation and reporting are a thing of the past.

CEMLink meets the data validation and reporting requirements of major Federal, State, and Regional level programs.

Security

CEMLink's built-in security model provides individual and group user privileges so you can customize access at any level.

Industries Served

Cement

Fine Chemicals

Glass

Petrochemical & Refining

Power Industry

Pulp & Paper

Steel

Waste to Energy

*Including, but not limited to the above.

Environmental compliance made simple.

VIM Technologies has been the leader in intelligent environmental software and compliance solutions serving all industries impacted by environmental compliance regulations for over 30 years.
